

ENERGY AND CLIMATE CHANGE POLICY

At Jupiter Aluminium Industries (JUPALCO), we recognize the urgent need to address climate change and transition to a low-carbon future. We are committed to reducing our environmental impact while maintaining operational excellence. This policy outlines our approach to energy management, carbon reduction, and climate resilience across all operations.

This policy applies to all JUPALCO facilities and stakeholders involved in our operations i.e. from raw material sourcing to production and distribution.

JUPALCO will achieve commitments through the following actions:

- Comply with applicable environmental and climate regulations, and other relevant local and international frameworks such as the Paris Agreement and Science Based Targets initiative (SBTi).
- Measure, monitor, and transparently report our energy use, greenhouse gas emissions, and progress toward targets through recognized frameworks.
- Set targets to reduce greenhouse gas emissions (Scope 1, 2, and material Scope 3).
- Allocating sufficient resources for implementing climate and energy strategies.
- Transition to renewable energy sources through investments in solar and other clean energy solutions.
- Integration of our energy and climate commitments with the performance evaluations.
- Implement energy efficiency measures across all operations, including waste heat recovery, process optimization, and adoption of best-in-class technologies to reduce specific energy consumption.
- Conduct regular climate risk assessments to identify physical and transition risks and implement adaptation measures to enhance operational resilience.
- Engage suppliers to encourage disclosure and reduction of their carbon emissions, ensuring alignment with our sustainability objectives.
- Train and empower employees at all levels to contribute to energy conservation and climate action initiatives, fostering a culture of sustainability.
- Collaborate with industry peers, governments, and NGOs to advocate for policies that support sector-wide decarbonization and climate resilience.
- Review and update climate strategies in line with new technologies, regulatory changes, and emerging best practices.

This policy is communicated to all stakeholders and reviewed every two years to ensure its continued effectiveness.
